SIMPHER CAR GARAGE EQUIPMENT

3D WHEEL ALIGNMENT

FT STAR
(2ND Generation)

FT STAR PLUS
(3rd Generation)

FT STAR PREMIUM
(4th Generation)

The 3D wheel alignment machine, generally termed as the 3D Wheel Aligner, from **Simpher car garage equipment** has been among the best wheel alignment equipments offered worldwide. The 3d wheel aligner is particularly suitable for use in car workshops and tyre service centers where wheel alignment is a regular service. With the new 3D wheel aligner from Technomatic, it takes only a few minutes to carry out precise and efficient wheel alignment on a car with a considerate time saving as compared to other traditional devices. Several models of 3d wheel alignment machine have been put forth by Technomatic to cater to the different needs of our valuable customers.

WHEEL BALANCER

2D Digital
FWB 750D

3D DigiAuto

FWB 850D

A wheel balancer is an essential tool to every automotive shop. With over 300 million vehicles driving on Indian roads, multiply that by four (4 wheels on a car) and you get well over 9 billion wheels that need balancing. Tires should generally be rotated every 5,000 to 7,000 miles, which is also a perfect time to bust out your shop's wheel balancer and prevent high-speed wheel vibrations. Being able to provide full service to all your customers—especially those who return time and time again—means you'll need a wheel balancer to keep up with demand. If you're doing suspension work, tire changes, detailing or any job that includes wheel removal, a wheel balancer is an excellent way to increase business at your shop. Just ask customers, "Wouldn't it be great if we balanced your wheels for you to keep you safer on the road?" They'll probably say yes! A wheel balancer increases your potential to perform all kinds of tire/wheel/suspension work; after all, responsible car owners will be returning to your shop every 3 months or so, which means that wheel balancer is going to keep you extra busy all year long.

TYRE CHANGER

FTC - 930

FTC - 940

FTC - 950 RFT

A tire changer is a machine used to help tire technicians dismount and mount tires with automobile wheels. After the wheel and tire assembly are removed from the automobile, the tire changer has all the components necessary to remove and replace the tire from the wheel. Different tire changers allow technicians to replace tires on automobiles, motorcycles and heavy-duty trucks. New tire and wheel technology has improved certain tire changers to be able to change a low profile tire or a run-flat tire.
